STEP DRILLS

Concept will work with you on new projects...

We will design prototype tooling...

We will "Reverse Engineer" your tooling needs utilizing your part print ...

We will produce "test" tools for you on a "performance" basis...

Concept Carbide will recondition all of the tools we make and most competitors' tools...

Concept Carbide Tool has been reconditioning and manufacturing cutting tools since 1979. Our skilled tool grinders have literally HUNDREDS of years of combined grinding experience.

We strive to keep our prices low, our deliveries fast and on-time, and our quality excellent.

CONCEPT CARBIDE TOOL

Concept Carbide Tool utilizes the latest in tool grinding technology with the use of Walter 5-axis Power machines with auto-loaders combined with Tru-Tech CNC centerless grinders, multiple manual grinders, and the latest in inspection and CAD/CAM systems like Walter Cyber-Grind, Auto-CAD, and SolidWorks to give you the ultimate cutting tools.

Concept Carbide is capable of producing concept tool drawings from your part prints or producing tooling from your existing prints.

We guarantee that all tools will be to your exact specifications taken from your furnished print or your signed and approved concept drawing.

Concept Carbide uses only the finest micrograin carbide available.

Solid Carbide tools with spiral or straight coolant holes are no problem.

Whether it is a keyseat cutter, endmill, form tool, step drill, "G"-drill, reamer, or just a simple alteration of a standard tool, we would greatly appreciate the opportunity to produce sample tools for you on a performance basis. We know it will work!

You will find that Concept Carbide is highly competitive and aggressive, and we strive to maintain an on-time status equaled by very few in our industry.
